# Can Texts Written by AI be Detected?

Each detector was given texts either written by GPT4, GPT3, and humans. The visualizat[ion] shows the share of texts that each AI detector classified **correctly** and **wrongly** for each category.
The detector that performed best in classifying the text as humand or AI written is emp[hasized] for each author category. OriginalityAI did the best job detecting texts written by one of [the] most advanced language models, GPT4, classifying 42% correctly.
